

# The EPATEE project

What we can learn from  
existing evaluation practices

---

Final EPATEE Conference

19<sup>th</sup> September 2019, Paris

This project has received funding from the  
European Union's Horizon 2020 Research and  
innovation programme under grant agreement No 746265.

# Coming from renewables I

realised that (policies  
The tool would work also in long  
addressing power needs, growing  
term, provided that there will be  
need to re-structure and invest in  
new material coming in.  
time lags are crucial (for a  
successful energy transition)

There is a lot more to share than we thought.  
It's sometimes hidden.  
EPATEE helped to gather these resources!

To put in front of the scene the issue of evaluation of energy efficiency policies, which is of the utmost importance :

Good evaluation guidance results in better informed decisions and saves more energy for less money.

First due to the key role of energy efficiency policy for climate issues,  
Second due to the impact of Article 7 EED in the size of those policies, with for example a present cost/value of 4 Billions euros a year for the French White Certificates

To put somewhere in a repository all necessary information about evaluation of energy efficiency policies

An index of all the evaluation conducted
