

Objective of the Toolbox: providing advanced guidance for ex-post evaluation in the energy efficiency domain

- General guidance on ex-post evaluation of Energy Efficiency Policies
- Providing a Knowledge Base of relevant references, and case studies with practical examples
- Providing advanced guidance on specific **Combinations of Policy measure, Sector and calculation Method**
 - By guiding users through different menus
 - By an interactive selection mechanism (wizard)

Toolbox set-up

Specific guidance/tools

- Based on general template for tool descriptions
- Descriptions for 30 tools (tailored to specific combinations of Policy Measure, Sector and Method) of how to execute the evaluation, given the needs and possibilities for the specific combination)
- References in Knowledge Base (+ examples in the case studies)
- References to General guidance in Toolbox
- References to internal Notes in the project

Examples of available combinations

- Evaluating normative legislative policies on energy efficiency in residential buildings
- Evaluating labelled energy efficient appliances for the residential sector using the method of deemed savings
- Evaluating impacts of fiscal measures on energy efficiency in transport using stock modelling
- Evaluating energy audit scheme for energy savings in industry using econometric estimate method
- Evaluating subsidies on energy efficiency in non-residential buildings using energy-intensity indicators
- Evaluating market based instruments on energy efficiency in residential buildings using econometric methods
- Evaluating Minimum Energy Performance Standards measures on energy efficiency of household appliances using direct measurements

Key take aways

- Evaluation increases the robustness of energy efficiency policy measures
- Guidance on energy policy measures, sectors and methods assists in a targeted evaluation approach
- The EPATEE toolbox provides this guidance at your fingertips

Special Wizard available for assistance in finding specific guidance
